

# Homework 02 – CV Verification Q&A

TA Team

**Q1:** Some provided CVs contain internal inconsistencies. Should the agent reject such CVs before SocialGraph MCP verification?

*Examples:*

- **CV\_4:** How can the candidate be "Senior Engineer" (2021–2027), "Consultant" (2020–2023), and complete a PhD (2021) all at once?
- **CV\_4:** Why does a "Legal Professional" have only engineering/quantum computing experience and a PhD in Legal Studies?
- **CV\_4:** Is "Singapore — Singapore / Philippines" a valid location?
- **CV\_1:** Is "Singapore, Kowloon" a possible location?
- **CV\_3:** Does the University of Tokyo offer a "BSc degree in Consulting"?

**A1:** No. Please treat the CV content as ground truth and proceed with SocialGraph MCP verification. Internal inconsistencies should decrease the rating score, not cause rejection.

**Q2:** If no exact social profile is found, should the CV be rejected?

**A2:** No. The agent should find the most similar existing profile and not reject a CV just because an exact match is not found. All CVs stem from MCP profiles (possibly with injected inconsistencies).
